

Kaylei Burke

Senior Software Engineer | Technical Lead | Ruby on Rails

Omaha, NE (Remote) • kaylei.burke@gmail.com • 402-909-3286 • kayleiburke.com • linkedin.com/in/kayleiburke

PROFESSIONAL SUMMARY

Senior Software Engineer with 10 years of experience designing, building, and operating large-scale web applications using Ruby on Rails, React, JavaScript, SQL, and AWS. Currently serving as the primary engineer and technical lead for Triton, a business-critical insurance platform at Ryan Specialty – spanning underwriting, claims, policy administration, and workflow automation for enterprise clients nationwide. Takes full technical ownership of architecture, production systems, cloud infrastructure, and delivery planning. Extensive background modernizing legacy applications, leading complex integrations, and shipping high-impact software in fast-moving environments.

WORK EXPERIENCE

Senior Software Engineer

Ryan Specialty – Ryan Alternative Risk Division

Contracted through TEKsystems; converted to FTE September 2025

December 2024 – Present | Remote

- ▶ Technical lead and primary engineer for Triton, a Ruby on Rails + React + MySQL insurance platform supporting underwriting, claims processing, policy administration, endorsements, bordereaux reporting, and third-party workflow integrations across the Greenhill business unit.
- ▶ Lead architecture, development, production support, and roadmap planning for a platform spanning dozens of insurance business domains.
- ▶ Led onboarding and technical ramp-up of two offshore developers, enabling expanded delivery capacity across the Triton platform; serve as sole engineer between junior developers and executive leadership.
- ▶ Coordinate directly with executives, product owners, cloud engineering, security, and external vendors including TEKsystems and IMS integration partners.
- ▶ Served as primary application SME for AWS-to-Azure migration planning, infrastructure assessment, and application modernization efforts in partnership with cloud engineering teams (TEKsystems / Avanade).
- ▶ Investigate and remediate AWS cloud security findings across EC2, RDS, S3, VPC networking, IAM, and data protection controls.
- ▶ Own production incident response, root cause analysis, deployment oversight, and on-call support for critical business systems.
- ▶ Develop, debug, and extend complex insurance rating, quoting, endorsement, and policy lifecycle workflows (bind, cancel, reinstatement, return premium) across multiple insurance programs.
- ▶ Maintain and extend a Python middleware service that integrates Triton with IMS policy administration systems via SOAP web services and SQL Server stored procedures – handling policy bind, endorsement, cancellation, reinstatement, and issuance transactions through a durable, sequenced job queue with structured error handling and retry logic.
- ▶ Manage AWS infrastructure including Elastic Beanstalk, RDS, S3, Lambda, SQS, VPC, site-to-site VPN via Palo Alto firewalls, and CI/CD pipelines via CircleCI.
- ▶ Drive technical planning, estimation, backlog prioritization, and delivery coordination across multiple concurrent initiatives.

Senior Ruby on Rails Developer (Contractor)

New York Public Library

August 2023 – October 2024 | Remote

- Contributed to the development and maintenance of a metadata management system in Ruby on Rails powering NYPL's Digital Collections platform – an online archive of digitized books, images, and artifacts.
- Led integration of a custom Shibboleth SSO solution enabling seamless patron authentication, including a novel approach authenticating directly through Sierra ILS via the Sierra API for credential validation and dynamic patron data retrieval.
- Successfully completed HathiTrust integration, enabling patrons to access thousands of digitized academic resources with their library credentials.
- Managed Shibboleth v3-to-v5 upgrade, enhancing security and establishing a foundation for future integrations with NYPL internal applications.
- Collaborated with DevOps to build Docker-based and EC2 testing environments from scratch.

Senior Software Engineer

Techstreet

October 2021 – June 2023 | Remote

- Supported multiple Ruby on Rails applications (versions 1–6) including custom storefronts, CRM, ERP, order tracking, and digital product management systems.
- Managed Level 3 support ticket queue, resolving 650+ tickets involving live production debugging, database manipulation (Oracle, Postgres, MySQL, MongoDB), and custom script execution.
- Delivered numerous feature enhancements, including integration of PDF Repair and Optimization tools into a custom product management system.
- Contributed to building a new Ruby on Rails CRM application with a greenfield development team.
- Supported SSO integrations (Okta, OpenAthens, Azure AD) using the ruby-saml gem, covering both IdP and SP-initiated login flows.
- Managed daily AWS operations across EC2, Amplify, ECS, Lambda, CloudWatch, Athena, CodeBuild, and CodePipeline.

EARLIER EXPERIENCE

Software Developer – Unabridged Software (2020–2021)

Built custom Ruby on Rails applications for clients, including file attachment functionality with activity feed tracking and AWS-backed storage. Wrote test suites using RSpec, Minitest, and Capybara.

Software Developer (Contractor) – 5&2 Studio (2018–2019)

Customized customer-facing and ERP websites using C#, Vue.js, and Ruby on Rails; built replacement site for [PhysEmp](#), a doctor job search engine.

Software Developer – Voxtelesys (2016–2018)

Led development of a customer portal (Vue.js frontend, Rails API backend) and drove conversion of a core PHP application to Angular + Rails. Worked directly with UI/UX and marketing to deliver production-grade results.

Software Developer – Mersoft Corporation (2015)

Replaced a client's legacy ERP, sales, and marketing platform with a new Ruby on Rails + PostgreSQL application integrated with Joomla CMS.

Software Developer (Contractor) – YRC Freight (2014–2015)

Created and managed executive financial reports using SAS, VBA, R, and JCL; built consolidated historical operating metrics dataset that significantly improved data accessibility.

Software Developer – J.B. Hunt (2013–2014)

Supported payroll, freight management, order processing, and customer survey systems using C#, Java, T-SQL, and DB2. Enhanced automated customer satisfaction survey dialing system with advanced SQL and custom business logic.

TECHNICAL SKILLS

Architecture & Leadership: System Design, Technical Leadership, Mentoring, Agile Planning, Production Support, Incident Response, Vendor Management

Languages: Ruby, JavaScript, TypeScript, SQL, C#, Java

Frameworks: Ruby on Rails, React, Vue.js, AngularJS, Ruby on Jets

Cloud & DevOps: AWS (EC2, RDS, S3, Lambda, SQS, ECS, Elastic Beanstalk, CloudWatch, Athena, Amplify, CodePipeline), Docker, CircleCI, Azure (migration)

Databases: MySQL, SQL Server, PostgreSQL, Oracle, MongoDB, DB2

Auth & Security: SAML, Shibboleth, Okta, OpenAthens, Azure AD, Identity Federation, CSRF/XSS remediation

Testing: RSpec, Minitest, Capybara

Tools: Git, GitHub, CircleCI, Jira, SOAP/REST API integration

EDUCATION

Bachelor of Science in Computer Science

University of Nebraska-Lincoln 2007–2011 | *Upsilon Pi Epsilon Honor Society, President (2 years)*
